

Our Real-time Virology and Oncolytic Virotherapy

Platforms to Test Antiviral Drugs, Virus-Neutralizing Antibodies and Vaccines

Monitoring the cytopathic effect of antiviral drugs and oncolytic viruses on cultured cells by combining image- and impedance-based readouts.

Through years of experience in virus research, we have developed applications platforms that allow for the testing of oncolytic viruses on various cancer cell lines, the investigation of antiviral drug effects in different settings, and the screening of virus-neutralizing antibodies.
